

# SLEURS NV

## “Leader in high-quality industrial realisations”

*Mr. Richard Sleurs founded this one-man business in metal construction in 1965. Nowadays, Sleurs NV is a blooming company, offering a wide range of metal constructions, machines and total projects.*

*Because market and demand changed over the years, the company and its infrastructure had to evolve, as well. The current production plant in Balen consists of 27,000 m<sup>2</sup> workshops, built on a 17 acre site.*

*The product range and service package offered by Sleurs are diverse and comprehensive, ranging from engineering and production to computer control, maintenance and after-sales services. Our experienced team takes up any challenge. Projects are developed ‘à la carte’, in the most diverse metals and materials, as part of a whole or as total projects.*

*Among other things, the company specializes in metal constructions with a high level of difficulty, heat-resistant and stainless steel processing, machine and boiler construction, special welding techniques, as well as industrial buildings.*

*Sleurs offers high-quality storage and handling solutions, such as hoppers, mechanical and pneumatic transport installations, industrial process control, measuring, mixing, dosing and dust removal techniques. The patented tube transport systems, suitable for dust-free transport of all kind of products, are completely developed, manufactured and mounted in-house.*

*In the field of environmental techniques, Sleurs is specialized in sleeve filters, electro-filters, single and double cyclones and combustion gas processing components with corresponding peripherals.*

*In the sphere of automotive techniques, Sleurs develops, manufactures and converts transport systems, floor and overhead conveyors, roll and chain conveyors, spray and immersion installation, and carry out general infrastructure transformation works.*

*The industrial services consist of maintenance, repair works, adaptation, optimization and renovation works of existing installations.*

*At Sleurs, we have a confident outlook on the future. We are willing to take on any challenge, and we are ready to tackle any market evolution, both national and international, in a flexible and professional way.*
